

FUNDING FOR **ENERGY RENOVATION** AS A STIMULUS FOR **URBAN REGENERATION**

Event organised by the **URBAN** Intergroup and Renovate Europe

26 September 2017

11h00-12h30

European Parliament - Brussels

Room JAN 6Q1

Energy Renovation can act as an important stimulus for **urban regeneration**. In addition to improving **living standards** and **reducing energy bills**, the energy efficient renovation of a building can be an opportunity to roll-out a comprehensive urban strategy with the aim of tackling **energy poverty**, boosting **social cohesion** and triggering **local jobs**.

Energy renovation has been identified as a **budget priority** at EU level but also at national and sub-national levels.

- What are the **benefits** of including energy renovation in an urban regeneration project?
- Which public and private financing models have been successful in local projects which achieve high energy efficiency standards?
- Which opportunities arise for Energy Renovation in the Juncker Fund and in the upcoming Multi-Annual Financial Framework?
